### VDM-7500 Wireless Video Dust Monitoring System

The VDM-7500 is the only commercially available instrumentation which measures the levels of lung damaging particulates while simultaneously overlaying dust concentration on to video images. All data is displayed real-time on the computer screen. This technique allows the investigator to record and obtain certain events that are clearly linked to workers exposure of airborne containments. This provides a more effective and focused way to implementing recommendation for controlling employee health.

Compliance program review

### Features

■ 100% wireless no cables  
[Learn More](#)  
Real-time video and dust

### Specifications

- Filter: Varies according to device selection
- Sensing range: Varies according to device selection
- PM size range: .1-100 µm
- Sampling flow rate: varies according to device selection
- Alarm output: 90 db at 3 ft
- Analog Output: 0-2 Vdc  
[Learn More](#)
- Digital output: RS-232

- NIOSH video exposure monitoring
- Waste Site remediation
- Useful tool for all particulate monitoring applications

- reading
- True breathing zone measurements
  - Compact & rapidly deployable
  - Also connects to EPAM-5000

**Record Time:** varies according to device selection

**Display:** Real-Time mg/m3

**Weight:** varies according to device selection

**Dimensions:** varies according to device selection
